Education

Universidad de San Carlos de Guatemala

Guatemala, Guatemala

Ingeniería en Ciencias y Sistemas (Computer Science and Systems Engineering)

Coursework completed: October 2025

Colegio Sagrado Corazón de Jesús

Guatemala, Guatemala

Bachiller en Ciencias y Letras

2017

Experience

Health Technology Company

Guatemala

Full Stack Developer

2024 – Present

- Develop and maintain web software on a backend and database administration team.
- Design relational schemas and tune queries to keep response times stable as data volume grows.
- Support production data operations across development, QA and production environments.
- Build features across the stack, from database layer through API to user interface.

Joyería y Relojería El Brillante

Guatemala, Guatemala

Administrative Assistant

2021 – 2024

- Coordinated scheduling and sales operations for a retail jewelry business.
- Produced reports, correspondence and internal documentation.
- Managed customer communications and social media presence.

Leadership & Activities

Revista ECYS — Universidad de San Carlos de Guatemala

Guatemala, Guatemala

Design and Layout

2026

- Designed and laid out the 28th edition of the school's digital magazine.
- Produced the issue in R / RStudio, building a reproducible publishing pipeline rather than applying layout manually page by page.
- Established type hierarchy and a consistent grid across the full publication.

Selected Projects

Relational Databases in Oracle

Designed two database systems from conceptual model to implementation: 20 tables, 10 stored procedures, audit triggers on every table, bulk loading of 20,000 records through a staging table, and a Flask REST API.

Distributed Voting System on Kubernetes

Built a high-volume ingestion pipeline with Go microservices, gRPC, Kafka queuing, Redis and MongoDB persistence, Grafana dashboards and Locust load testing across 6 containerized services.

Browser-Based Chatbot

Trained a Keras neural network for intent classification over 784 intents, exported to TensorFlow.js to run entirely client-side with no backend.

Skills & Interests

Technical: Python, Go, SQL, PL/SQL (advanced) · MySQL, Oracle, MongoDB, Redis · React, TypeScript, JavaScript, HTML/CSS · Kubernetes, Docker, Kafka, gRPC · TensorFlow, Keras, NLTK, R / RStudio · Git

Language: Spanish (native) · English (C1, certified)

Interests: Relational data modeling, editorial design, distributed systems.
